                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               434
                                                                                                                                                                                                                                                                                                 The invention relates to novel human kinases and phosphatases (KPP) polypeptides and polynucleotides. Polypeptides of the invention are used for screening agonists and antagonists. They are used to make monoclonal or polyclonal or antibodies, which are used in diagnostic tests for conditions or diseases associated with expression of the polypeptide. They are also useful for diagnosting or treating diseases or conditions associated with decreased expression or overexpression of functional KPP e.g. cardiovascular or neurological disorders or cancer. The invention is useful in gene therapy. The present sequence is human KPP cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   180

```
The invention relates to novel isolated polypeptides, mature form of the polypeptide, a sequence that is 95% identical to the polypeptide or the polypeptide comprising one or more conservative substitutions. The NOVX polypeptide is useful for treating or preventing a pathology associated with the polypeptide e.g. disorders associated with aberrant expression or activity of the polypeptide, such as cancer, diabetes, obesity, and endocrine, CNS and inflammatory disorders. They can also be used in endocrine, con a creaning assays, chromosome mapping, tissue typing and predictive medicine. This sequence corresponds to the coding sequence for one of the polypeptides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CAAAGGAAGAACAGTTCCCAGCGCGCTGCTCCAGCTGATTCAGGAACGCCTGGAA 384

The invention discloses a polymucleotide comprising a sequence selected from 1970 fully defined nuclectide sequences which encode novel control of the polymucleotide, an antibody binding to the polympetide or peptide or its partial peptide, an antibody binding to the polympetide or peptide of the polymucleotide, immunologically assaying the polympetide or peptide of the polymucleotide by contacting the polympetide or peptide or peptide of the polymucleotide by contacting the polympetide or peptide or between the two, a transformant carrying the polymucleotide in an observing the binding or between the two, a transformant carrying the polymucleotide in an or contact a primer for synthesising the polymucleotide in an order of a useful as a primer for synthesising the polymucleotide or as a probe or contact and an antisense polymucleotides and encoded proteins are useful as pharmaceutical agents and many disease-related contactions for regulation of their expression and activity, or as targets of gene may be included in them, for developing a diagnostic marker or configurate proteins, signal transduction-related proteins, capanal transduction-related proteins, signal transduction-related proteins, capanal transduction-related proteins, capanal diseases (e.g. osteoporosis, encoding them can be used as indicacors for diseases (e.g. osteoporosis, encoding them can be used as indicacors for diseases (e.g. osteoporosis, encoding them can be used as indicacors for diseases (e.g. osteoporosis, encoding them can be used as indicacors for diseases (e.g. osteoporosis, cancer, tumours. The cDNA may be used to regulate the activity or expression of the encoded proteins of the sequence conting them can be used as indicacors for diseases. The charaction by a capanal capanal diseases (e.g. osteoporosis, encoding them can be used as indicacons for diseases. The charaction of the invention. Note: Some of the sequence of the activity or expression of the invention of the code of the encoded proteins of the sequence of the activity 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          387

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  720
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               420
                                                                                                     The invention relates to novel isolated polypeptides, mature form of the polypeptide, a sequence that is 95% identical to the polypeptide or the polypeptide comprising one or more conservative substitutions. The NOVX polypeptide is useful for treating or preventing a pathology associated with the polypeptide e.g. disorders associated with aberrant expression or activity of the polypeptide, such as cancer, diabetes, obesity, and endocrine, CNS and inflammatory disorders. They can also be used in various detection and screening assays, chromosome mapping, tissue typing and predictive medicine. This sequence corresponds to the coding sequence for one of the polypeptides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               요 영
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            8 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is a cDNA encoding human 27802 adenylate kinase. The 27802 protein and its corresponding nucleotide sequence is useful for amodulating, diagnosing and treating cellular proliferative and/or differentiative, neurological, inflammatory, lymphatic, cardiovascular, differentiative, neurological, inflammatory, lymphatic, cardiovascular, immune, respiratory and haematological disorders. 27802 sequence is useful for treating immune disorders (e.g., Crohn's disease), disorders involving blood vessels (e.g., atherosclerosis), disorders involving brain and lymph nodes (e.g., acquired immune disorders involving brain and lymph nodes (e.g., acquired immune disorders involving brain and lymph nodes (e.g., acquired immune disorders involving precursor feels (e.g., systemic inpus exphematosus), disorders involving precursor feels (e.g., lymphoblastic leukaemia), plenkaemia), disorders involving precursor T-cell neoplasms 27802 sequence is useful for motulating cellular growth and/or cellular metabolic pathways, proteins involved in scenariog one or more proteins involved in growth and come tabolism. 27802 bNA is used in gene therapy. 27802 sequence or its antibody are useful in screening assays, detection assays (e.g., chromosomal mapping) tissue typling, forensic biology), preventive cor crials and pharmacogenomics) and in methods of treatment
                                                                                                                                                                                                                                                                                                                                                                        New adenylate kinase polypeptide for diagnosing/treating cellular
proliferative and/or differentiative, neurological, immune, inflammatory,
lymphatic, cardiovascular, respiratory and hematological disorders.

cc kinase proteins and polynucleotides encoding such proteins. The human ATPase-like molecules are useful for modulating ATPase function. They are useful in modulating organelle biogenesis, cell-cycle regulation, protein degradation and vesicle-mediated transport. They are also useful for treating disorders associated with aberrant ATPase-like expression or activity such as splenomegaly, pulmonary embolism, atrests and primary cc activity such as splenomegaly, pulmonary embolism, atrests and primary cc useful for modulating the biosynthetic pathway involving the synthesis of the membrane phosphatidylserine (FS). They human phosphatidylserine cysprubase-like molecules are useful for treating disorders associated with aberrant human phosphatidylserine (FS). They human phosphatidylserine (FS). They human phosphatidylserine (FS) astrocytes and Hodgkin disease. The human 5698, DNA fragmentation factoristem are useful for modulating apportor events, including DNA fragmentation. The human 5698 molecules are useful for treating diseases cut as autoimmune, haematopoietic and blood clotting systems. They are modulating immune, haematopoietic and blood clotting systems. They are useful for treating a disorders associated with aberrant human cuseful for treating a disorder associated with aberrant human cyspendiating cellular growth and/or cellular metabolic pathways. They are cuseful for treating hypertension, atherosclerosis and oligodendrocytes. The present sequence is human 27802, adenylate kinase conn

Novel polypeptides useful for diagnosing, treating, preventing and/or prognosing disorders related to the proteins, including cancers, immune disorders and neuronal disorders.

Claim 1; SEQ ID NO 257; 880pp; English.

The invention relates to novel isolated polypeptides (I), and polymucleotides (II). (II) and the antibody to (I) are useful for diagnosing, preventing and treating diseases including immune system disorders (e.g. congenital and acquired immunodeficiencies, autoimmune configurates (e.g. congenital and acquired immunodeficiencies, autoimmune disorders (e.g. rhematoid arbitrits), inflammatory conditions, organ transplant rejections and graft versus host disease, infectious diseases (e.g. transplant rejections and graft versus host disease, infectious diseases (c.g. disorders, primary haematopoietic disorders, hyperproliferative disorders (e.g. disorders, primary haematopoietic disorders, primary haematopoietic disorders, chromosomal abnormalities (c.g. daucher, s disease, Parkinson's disease), chromosomal disorders (e.g. alzheimer's disease), reprovative disorders (e.g. stroke), renal disorders (e.g. confinentions), crespiratory disorders, dermatological disorders (e.g. arrhythmia), crespiratory disorders, dermatological disorders (e.g. Addison's cinflammatory disorders), liver disorders, gastrointestinal disorders (inflammatory disorders) liver disorders (cirrhosis), as stimulators of cinflammatory disorders), liver disorders (cirrhosis), as stimulators of higher affinity antibodies, and as a means to induce tumour proliferation hathologies e.g. acquired immune deficiency syndrome (ADS). AAS20976-AAS27850 represent novel signal transduction pathway protein coding

```

pathological condition in a subject, by determining the presence or amount of expression of the polypeptide in a biological sample and diagnosing a pathological condition or a susceptibility to a pathological condition based on the presence or amount of expression of the condition based on the presence or amount of expression of the polypeptide. The polypeptide is also useful for identifying a binding partner and determining whether the binding partner and determining whether the binding partner ceffects an activity of the polypeptide. The polypeptide or the nucleic acid encoding the polypeptide is useful for preventing, treating, or ameliorating a medical condition, which involves administering the polypeptide or the nucleic acid to a mammalian subject. The nucleic acid pathological condition in a subject, which involves determining the presence or absence of a mutation in The nucleic acid, and diagnosing a pathological condition or susceptibility to a pathological condition or susceptibility and suspective or absence of the mutation in the suspectibility or the polypeptide, the suscept sequence represents sequence represents sequence represents sequence represents sequence or susceptibility and su seqdata.uspto.gov/sequence.html?DocID=20020168711. \$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$

A composition containing PKIN agonist is useful for corresponding cDNAs. A composition containing PKIN agonist is useful for treating a disease or condition associated with decreased expression of PKIN and a composition comprising PKIN antagonist is useful for treating a disease or condition associated with overexpression of PKIN. The disease or condition associated with overexpression of PKIN. The adisease or condition associated with overexpression of PKIN. The disease is myeloma, sarcoma, teratocarcinoma, Addison; Jumphoma, melanoma, myeloma, sarcoma, teratocarcinoma, Hodgkin's disease, immune disorder (Acquired Immune Deficiency Syndrome (AIDS), asthma, Addison's disease, atheroscierosis, anaemia, allergies, adult respiratory distress syndrome, autoimmune thyroiditis, gout, bronchitis, Crohn's disease, diabates mellitus, multiple sclerosis, Good pasture's syndrome, Graves' disease, cstematoid arthritis, Sjogren's syndrome, uveitis, ulcerative colitis, costeoarthritis, sjogren's syndrome, uveitis, ulcerative colitis, cardio arthritis, parasitic, fungal, viral, protozoal and helminthic infections) crowth and development disorders (arteriosclerosis, eirrhosis, hepatitis, Cushing's syndrome, hypothyroidism, cerebral palsy, cataracts); cardio vascular disease, chronic bronchitis, lung tumours); lipid disorder (fatty liver, Pabry's disease, Nicemann-Pick's disease, chronic bronchitis, lung tumours); lipid a test compound and in gene therapy. The present sequence is human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New polypeptides, useful for diagnosing, treating or preventing disorders of growth and development, cardiovascular and lipid, and diseases such as cancer, comprise human kinase polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 632

                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polymuclectides are useful in gene therapy. A composition containing a polypeptide or polymuclectide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous as larged neuropathies and central nervous system diseases, such as lazahiner's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as Immune system suppression, activity, chemotextic/chemokinetic activity, haemostatic and thrombolytic activity, cencer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders.                                             g
                                                                                                                                                               The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAAI82131) with noctropic, encoded polypeptides (AAAI812131) with noctropic, immunosuppressant and cytostatic activity. The polymucleotides are useful in gene therapy. A composition containing a polypeptide or polymucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous localised neuropathies and central nervous system disease, anyotrophic of lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as Immune system suppression, and thrombolytic activity, chemotactic/chemokinetic activity, heemostatic and thrombolytic activity, cancer disapnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and construction of the sequence data for this patent did not form part of the printed specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AATGAGTTTTCCTATACGGCCACCGAAGCCAGAAGCCTTTATCTGCAAAGGAAGACGTT 339

The polynucleotides and polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haemacopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, archritis and inflammation.
